Der Einsatz der Spezialklemme nach DEVIN in der Karotis-Chirurgie ist sehr vorteilhaft, da das Instrument nicht in das Operationsfeld hineinragt und bei der Arteriotomie ein freies Gesichtsfeld gewährleistet ist.

The special DEVIN clamp offers numerous advantages for carotid surgery. Its use ensures that the area in which the arteriotomy is performed is not obstructed by any instrument in front of or behind the operating area.

La utilización de la pinza especial DEVIN en la cirugía de la carótida ofrece grandes ventajas; de este modo no hay ningún instrumento que cruce (tanto adelante que atrás) la región de la arteriotomía.

L'utilisation du clamp spécial de DEVIN est trés avantageuse pour la chirurgie carotidienne, car ainsi il n'y a pas d'instrument qui croise (par devant ou par derrière) la région de l'artériotomie.

La pinza DEVIN offre numerosi vantaggi nella chirurgia della carotide. Il suo impiego assicura che nell'area ove viene eseguita l'arterioctomia il campo non sia ostruito (davanti e dietro).

Die Spezialklemme ermöglicht ein den anatomischen Verhältnissen angepaßtes Anlegen an der Vena cava inferior oberhalb der Leber. Die Verriegelung am oberen Ende des Maules hält nach dem Anlegen der Klemme die Maulteile fest zusammen und verhindert somit ein Ausschlüpfen der mit dem Zwerchfell abgeklemmten Vena cava inferior.

The special clamp makes it possible to clamp the vena cava inferior above the liver according to the anatomic conditions. The lock at the upper end of the jaws fixes firmly the parts of the jaws of the clamp after it is placed, thus impeding the vena cava inferior - clamped together with diaphragm - from slipping out.

Se facilita la colocación amoldada de la vena cava inferior sobre el hígado, por causa de la forma anatomica de la pinza clamp especial. El cierre a la punta de la mandibula sujeta firmamente la pinza clamp y evita que se escape la vena cava inferior con el diafragma.

Le clamp spécial permet un clampage atraumatique de la Veine Cave inférieure au-dessus du foie, adapté aux conditions anatomiques. L'anneau terminal permet de maintenir les mors joints évitant ainsi le glissement de la Veine Cave supérieure clampée avec le diaphragme.

La pinza permette di clampare la Vena Cava inferiore sopra il fegato data la sua forma anatomica. Il fermo nella parte superiore blocca saldamente le estremità della pinza impedendo che la Vena Cava inferiore scivoli via.
